Thin stamped overlays have become one of the most sought after applications in the commercial and residential building and reconstruction markets today.

Achieved with TEXTURE-PAVE™, thin stamped overlays are designed and engineered to create the authentic and natural look and feel of stone, slate, brick and tile just like conventional full depth stamped concrete applications. However, TEXTURE-PAVE™ is installed at only 1/4" to existing concrete surfaces and eliminated the cost, hassle and downtime of tearing out and replacing the existing concrete like conventional full depth stamped concrete finishes.

Because TEXTURE-PAVE™ is an engineered, polymer modified coating, it is actually stronger and more durable than conventional concrete as well as stamped concrete applications, making it the ideal surface for residential and commercial applications such as driveways, pool decks, patios, sidewalks, hotel lobbies, retail stores, shopping malls and more.

TEXTURE-PAVE™ is so versatile that it can be colored and textured in hundreds of combinations to match surrounding architecture and designs or even create a new theme.
